

Maryland Medicaid Mental Health Formulary

Updated July 1, 2016

Drugs from the American Hospital Formulary Service (AHFS) therapeutic classes listed below are included in the Maryland Medicaid Mental Health Formulary. These mental health medications are carved out of the MCO pharmacy benefit and are payable as fee-for-service through Maryland Medical Assistance. Some of these drugs are subject to the prior authorization requirements of the Preferred Drug List (PDL) and clinical criteria.

Refer to following links for:

PDL: <https://mmcp.dhmh.maryland.gov/pap/Pages/Preferred-Drug-List.aspx>

Clinical Criteria: <https://mmcp.dhmh.maryland.gov/pap/Pages/Clinical-Criteria.aspx>

The following five drugs, which may be used for some mental health indications, are not payable fee-for-service, unless otherwise noted, and are the responsibility of the HealthChoice MCOs for their enrollees regardless of the prescriber.

Clonidine*

Guanfacine*

Leuprolide acetate**

Liothyronine

Medroxyprogesterone**

* Clonidine (Catapres) and the generic guanfacine (Tenex) remain drugs for which coverage is the responsibility of the member's Managed Care Organization. For recipients 6 – 17 years old, the extended release forms of guanfacine (Intuniv) and clonidine (Kapvay) are included on the mental health formulary and billed fee-for-service. For individuals not in this age range, guanfacine ER and clonidine ER will continue to be part of the MCO pharmacy benefit.

**** When leuprolide acetate or medroxyprogesterone are used for the treatment of adult males with certain diagnosed behavioral disorders, these two drugs will be paid fee-for-service, but will require preauthorization (PA) through the University of Maryland School of Pharmacy CAMP program at 410-706-3431.**

Please note: Brand drugs which currently do not have a generic equivalent are listed by brand name in italics. Those drugs currently available generically are listed by generic name.
